

**CRYPTOMATHiC**

Cryptomathic's Signer is a leading remote electronic signature solution and Qualified Signature Creation Device (QSCD).

Signer empowers trust service providers, governments, and financial institutions to create legally binding electronic signatures whilst reducing compliance burdens.

Signer is aligned with eIDAS and similar regulations to create certified and standardized experiences across international markets.

## 1 Demonstrable compliance

Reduce time spent on compliance audits with our QSCD, that is both eIDAS and Common Criteria certified. Combined with our Service Signing Application, Signer is a cost-effective way to achieve compliance by design.

## 2 Interoperability

Ensure seamless alignment with eIDAS and EUDI wallets by using our solution built on industry and internet standards. Signer uses no proprietary technology, so there's no need for replacement when entering new markets or complying with future regulatory updates. For true interoperability, Signer can be configured to integrate with multiple signature portal providers and various certificate authorities.

## 3 Ease of implementation

Replace your existing remote signing solution and QSCD without disruption to your existing business operations. Signer provides a qualified signature / seal creation device with standardized CSC 2.0 APIs, for smooth implementation.

# SIGNER

## 4 Future Proofing

Create a future-proofed signing and sealing ecosystem, by using best-in-breed technology and modular architecture for each function in your tech stack.

## 5 Sealing

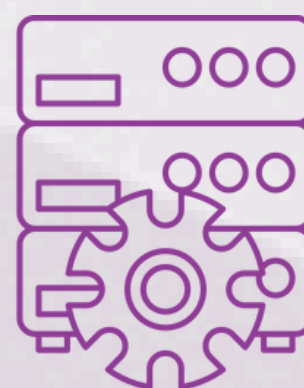

Achieve cost-efficiency by utilizing our QSCD for both signing and sealing. Signer offers high-performance qualified sealing capabilities tailored for high-volume sealing use cases. As demand for sealing grows across the eIDAS domain, you'll be well-equipped to meet this need.

## 6 Legal Certainty

Did you know that most eSignature solutions are used to optimize operations, not to provide legal certainty? Our QSCD and Signer suite offers qualified electronic signatures that are legally binding across international borders, as per eIDAS regulation.

## 7 Signer, your way

Onboard Signer in the way that best suits your needs:

- On-premise entirely in your data centres for complete control
- A managed, qualified signature service with APIs to minimise IT and privacy footprints
